

Northrop Grumman RW-21 Project Pipeline Installation: Grumman Road East Tree Trimming of Town-Owned Trees July 29-30, 2020

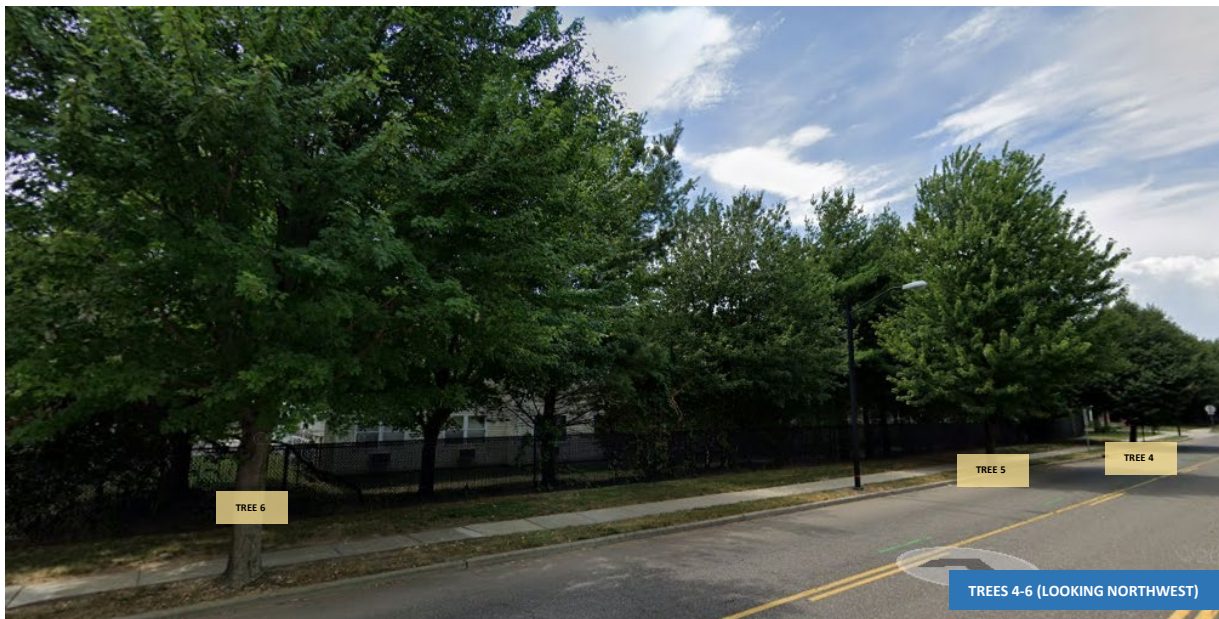

A total of 18 Town of Oyster Bay trees are located in the grass median between the concrete sidewalk and curb on the southwest and west sides of Grumman Road East (Hickey Blvd). These trees typically have trunks about 12-15 inches in diameter and are about 30-35 feet high. Branches that hang below about 17 feet above the pavement will be trimmed prior to pipeline installation work beginning. Additionally, branches up to about 22 feet above pavement will be temporarily tied back out of the way so as to not be damaged by excavation equipment.
