

Memo

To: Bethpage Residents
From: Edward Hannon, Project Director
Date: Thursday, February 3, 2022
Subject: RW-21 project update
Community meeting tonight at 7 p.m.
PSE&G power activation to well vault meters next week
Inspection of leak detection system manholes next week

Next week, we will be working with PSE&G to activate power for two well vault electrical meters.

1. Monday, February 7, 2022: Remedial Well 20 (RW-20) on the south side of William Street just west of Broadway.
2. Tuesday, February 8, 2022; Remediation Well 22 (RW-22) on the utility corridor west of Broadway

You may observe our contractor working with two trucks at those locations to connect electrical power from the poles to the meters supporting the wells. We expect the work to take one day at each location.

The meter supporting Remedial Well 21 (RW-21) located in the commuter lot at Seaman Avenue was activated yesterday.

In addition, next week we will again inspect the leak detection manholes along the piping route in the residential streets as part of our quality controls leading to system start up in the summer. We will follow up with additional schedule information in the next few weeks for the final installation of that system.

We look forward to seeing you at tonight's community update. Our project updates, including tonight's meeting information, can be found at www.northropgrumman.com/bethpage.

If you have any questions, please contact **Dianne Baumert-Moyik** via mobile at **(516) 754-2645** or via email at Dianne.baumert-moyik@ngc.com.

We appreciate everyone's continued support. Thank you.
